PROFESSIONAL SUMMARY

Senior BI / MI Analyst with 3+ years' experience delivering operational BI products end-to-end across large-scale logistics and consulting environments. I build trusted reporting foundations (SQL + semantic modelling), deliver decision-ready Power BI dashboards, and apply governance controls (KPI definitions, reconciliation checks, documentation, runbooks) to keep metrics reliable through change. Currently working in Microsoft Fabric (Lakehouse, PySpark, pipelines) to modernise legacy reporting logic into scalable patterns.

CORE SKILLS

- **BI & Reporting**: Power BI (semantic modelling, DAX, Power Query, RLS), dashboard design for operational and senior audiences, KPI definition, drill-through analysis, DAX Studio performance tuning
- **Data & Platforms**: SQL / T-SQL (CTEs, window functions, query optimisation), Microsoft Fabric (Lakehouse, Warehouse, Pipelines, Notebooks, semantic models), PySpark, SSIS, Excel / VBA
- **Data Modelling & Quality**: dimensional modelling, ERDs, data-flow mapping, reconciliation checks, validation controls, metric governance, documentation and runbooks
- **Stakeholder Delivery**: requirements gathering, stakeholder management, workshop facilitation, insight presentation, mentoring/support for end users and colleagues

PROFESSIONAL EXPERIENCE

GXO Logistics — Bradford, UK
Senior MI Analyst — *Jan 2026 – Present*

- Owned end-to-end delivery for a defined subset of reporting datasets in Microsoft Fabric across Pre-Advice, Orders, and Inventory Transactions, covering ERD design, ingestion, PySpark transformation, and curated outputs for downstream reporting.
- Built and maintained Fabric pipelines and notebooks using PySpark and SQL, applying repeatable transformation and validation patterns to improve reliability and consistency of reporting data.
- Implemented reconciliation checks between legacy and Fabric outputs to validate migrated metrics before adoption, improving confidence in published numbers and reducing ambiguity during cutover.
- Improved query performance by aligning storage/partitioning decisions to dominant consumption patterns (e.g. introduced categorisation used by downstream filters to reduce scan volumes and improve responsiveness).
- Built and optimised Power BI reporting for operational performance, creating both detailed and leadership-level views and applying semantic modelling, DAX, and performance tuning to improve usability and responsiveness.
- Produced ERDs, data-flow diagrams, and runbook notes to document entity keys, lineage, and support processes, improving auditability and reducing single-person dependency during migration.

NexAura — Remote
Data Consultant (Project-based) — *Jul 2025 – Jan 2026*

- Co-delivered an AI QA and coaching MVP for a call centre, covering call ingestion, transcription, rubric-based scoring, and dashboard-ready outputs for agent and team performance review.
- Translated QA requirements into scoring logic, KPI definitions, reporting views, and supporting data structures/validation checks, helping ensure outputs were consistent, auditable, and usable in practice.
- Produced client handover artefacts including SOPs, KPI dictionaries, and process maps, enabling adoption and reducing post-delivery support risk; the MVP materially lowered the unit cost of QA coverage versus manual QA resourcing by shifting effort from manual sampling to automated first-pass scoring with human review focused on exceptions.

GXO Logistics — Bradford, UK

Data Analyst (MI) *Aug 2022 – Aug 2024*

- Delivered end-to-end BI solutions to improve reporting, operational visibility, and process control across warehouse operations, using Power BI, SQL, Power Query, Power Apps, and Excel VBA.
- Floor Walk digitisation (end-to-end): replaced ad-hoc inventory checks with a Power Apps + SharePoint + Power Query + Power BI solution, enabling structured issue capture with photo evidence and standardised categories.
- Removed double-handling and improved consistency, saving 4-8 staff hours per day across ~30 users and 3 shifts, while improving comparability of findings across teams and time periods.
- Enabled weekly senior reviews of recurring issues (by area/category/shift), supporting more evidence-based escalation and clearer accountability.
- Owned weekly finance and operational performance reporting for senior leadership, integrating inputs from Finance, HR, Payroll, Planning, and Operations into a consolidated view of site performance.
- Investigated and resolved data issues and variances across source inputs, working with multiple teams to reconcile figures, validate assumptions, and reflect operational context such as downtime, fire alarms, and seasonal workload changes.
- Produced high-level summaries for senior stakeholders, chaired weekly reporting discussions, and responded to challenge/questions on performance movements, drivers, and reporting logic.
- Automated a suite of 10+ daily operational reports in Excel VBA, covering multi-file ingestion, cleaning, calculations, pivot/chart refresh, and email distribution; saved 6 hours/day and reduced manual error risk through standardised logic and validation checks.

EDUCATION

Leeds Trinity University — Leeds, UK
PGCE Secondary Mathematics — *Sep 2024 – Jul 2025*

University of Leeds — Leeds, UK
BEng Chemical and Process Engineering — *Sep 2019 – Jun 2022*

Dixons McMillan Academy — Bradford, UK
*A Levels: Mathematics – **A***, Chemistry – **A**, Physics - **B*** — *Sep 2017 – Jul 2019*

CERTIFICATIONS

- **Coursera:** Google Data Analytics Professional Certificate (2022)
