PROFESSIONAL SUMMARY

BI Developer / Senior Data Analyst with 4 years' experience delivering Power BI, SQL and Microsoft Fabric-enabled data products and reporting automation across large-scale logistics, operations, finance and workforce environments. Experienced turning messy cross-functional data from databases, flat files, APIs and business systems into trusted reporting used by senior leaders and frontline managers to monitor performance, control cost, identify underperformance and support operational decision-making. Combines hands-on BI/data delivery with delivery leadership, including stakeholder discovery, modelling, validation, rollout, documentation, adoption support and mentoring across small technical teams.

CORE SKILLS

- **Power BI & BI Development:** Power BI, DAX, Power Query, semantic modelling, dashboard design, KPI reporting, drill-through analysis, RLS, Power BI Service, report optimisation, stakeholder-ready reporting
- **SQL, Fabric & Data Engineering:** SQL/T-SQL, CTEs, window functions, query optimisation, Microsoft Fabric, Lakehouse, Pipelines/Data Factory, Notebooks, SQL endpoints, Python/PySpark, ETL/ELT, orchestration, medallion architecture, Dev/Prod environment management, API/flat-file ingestion, OAuth authentication
- **Modelling, Governance & Quality:** source-to-target mapping, ERD design, data lineage, validation checks, reconciliation, run logs, null/key checks, freshness checks, KPI definitions, documentation, BAU support
- **Stakeholder Management & Delivery Leadership:** requirements gathering, workshop facilitation, cross-functional delivery, UAT/support, sign-off, adoption support, insight presentation, project coordination
- **Business Domains:** operations, logistics, finance reporting, HR, payroll, workforce planning, performance/people management, KPI reporting, WMS & CMS data
- **AI, Automation & Modern Data Tools:** Git/GitHub, dbt, Databricks Fundamentals, CI/CD, Claude Code, Codex, Copilot, AI-assisted documentation, debugging and development workflows

PROFESSIONAL EXPERIENCE

Senior BI Analyst

GXO Logistics

Bradford, UK

Jan 2026 – Present

BI/data delivery role supporting a **£200M** logistics contract, with work spanning Power BI reporting, Microsoft Fabric Lakehouse development, medallion architecture, Dev/Prod release handling and validation controls.

- Delivered **Microsoft Fabric** data products within a Lakehouse/medallion architecture, ingesting data from databases, flat files and APIs into governed reporting layers used for operational and workforce reporting.
- Built a Fabric Notebook pipeline to extract Kronos timecard data via **API**, reconstruct shift-level clock-in/out and break records, and load curated outputs into a Lakehouse Delta table for downstream Power BI reporting.
- Implemented Delta MERGE/upsert logic to make recurring loads idempotent, reducing duplicate-record risk and supporting safer daily refreshes across workforce data.
- Designed reconciliation, validation and run-log controls between legacy and new reporting outputs, reducing cutover risk and helping prevent reporting drift across business-critical datasets.
- Developed a **self-service** employee kiosk using Raspberry Pi and VuePilot, allowing frontline colleagues to check performance ratings and submit downtime incidents without waiting for manager availability.
- Drove adoption of the kiosk product across the operation, reaching **c.200 report views/day** over a 2-month period and demonstrating strong frontline engagement with self-service reporting.
- Built stakeholder-specific Power BI reporting with row-level security, giving managers and senior leaders controlled access to performance views tailored by team, function and escalation need.
- Partnered with Operations, Finance, HR, Payroll, Planning and site leadership to resolve conflicting source definitions, sense-check outputs and secure validation/sign-off for decision-critical reporting.

Co-Founder, Data & AI Lead

Remote

NexAura

Oct 2024 – Present (Part-time, personal time)

Part-time co-founder and Data & AI Lead for an AI, automation and data consultancy, leading client-facing delivery across AI QA, healthcare systems, reporting automation, dashboarding and managed-service capability.

- Led delivery of an AI-enabled QA tool for call-centre operations, progressing the product from MVP to contract-signing stage in collaboration with a government telecoms organisation.
- Contributed to a multilingual AI QA solution covering transcription, rubric-based scoring and performance dashboards, designed to increase call-review coverage by c.**10x** at broadly similar cost.
- Helped shape high-throughput QA requirements across Urdu, English and mixed-language calls, targeting **95%** transcription accuracy and consistent dashboard-ready scoring outputs.
- Led reporting automation and dashboard discovery for a US e-commerce business serving **7- to 8-figure** Amazon brands, translating operational workflows into data requirements and automation opportunities.
- Supporting the delivery of a healthcare management system for a private clinic, with a modular structure intended to support future rollout to additional clinics and healthcare providers.
- Built delivery infrastructure across GitHub, documentation, task management and communication workflows, improving collaboration, backlog visibility, handover quality and delivery discipline across a small team.
- Mentored and coordinated **4** junior contributors across data, AI and software delivery tasks, providing direction on requirements, documentation, solution structure, testing and client-readiness.

Data Analyst (BI)

GXO Logistics

Bradford, UK

Aug 2022 – Aug 2024

Delivered BI, finance reporting and process automation across a high-volume logistics operation, supporting senior leadership visibility, operational control and continuous-improvement activity across shifts, teams and site functions.

- Owned weekly KPI, finance and operational performance reporting for a **£200M** contract, consolidating inputs from Finance, HR, Payroll, Planning and Operations into a single senior-leadership view of site performance.
- Chaired weekly performance discussions with senior stakeholders, explaining performance movements, metric definitions, data logic and operational drivers behind labour, downtime, productivity and cost trends.
- Reconciled conflicting source inputs and investigated data issues across operational and finance datasets, improving confidence in reporting used for leadership decisions and external-facing performance narratives.
- Led digitisation of an inventory check process, replacing ad hoc manual checks with structured issue capture, photo evidence and standardised reporting categories.
- Removed manual double-handling and improved process consistency, saving **4-8 hours/day** across c.30 users and 3 shifts while improving visibility of recurring issues by area, category and shift.
- Supported continuous improvement activity linked to c.**£500,000** of annual operational savings.
- Automated 10+ Excel-based reports covering multi-file ingestion, data cleaning, calculations, pivot/chart refresh and email distribution, saving c.**6 hours/day** and reducing manual error risk through standardised logic and checks.

EDUCATION

Leeds Trinity University

PGCE Secondary Mathematics

Leeds, UK

Sep 2024 – Jul 2025

University of Leeds

BEng Chemical and Process Engineering

Leeds, UK

Sep 2019 – Jun 2022

CERTIFICATIONS

- Google Data Analytics Professional Certificate (Coursera, 2022)
- Databricks Fundamentals (2026)
