PROFESSIONAL SUMMARY

Senior Data Analyst / BI Specialist with 3+ years' experience designing and improving reporting, controls, and decision-support products across operationally complex environments. Strong track record of transforming manual and legacy reporting into trusted, automated outputs using Power BI, SQL, Excel, Power Query, VBA, and Microsoft Fabric. Experienced across the full analytics lifecycle, including requirements gathering, dashboard development, data modelling support, validation and reconciliation controls, documentation, and stakeholder sign-off. Currently contributing to a Microsoft Fabric migration programme, with hands-on exposure to Lakehouse, Pipelines / Data Factory, Notebooks, semantic models, PySpark, SQL endpoints, and Power BI Service. Practical user of generative AI tools to accelerate documentation, debugging, and delivery, with independent validation of code, logic, and outputs.

CORE SKILLS

- **Analytics & BI**: Power BI, DAX, Power Query, Excel, dashboard design, KPI reporting, RLS, management reporting, data storytelling, drill-through analysis
- **Data & Automation**: SQL / T-SQL, Python / PySpark, Microsoft Fabric, Lakehouse, Pipelines / Data Factory, Notebooks, semantic models, SQL endpoints, ETL / ELT, orchestration, Excel VBA
- **Data Modelling & Quality**: dimensional modelling, source-to-target mapping, ERDs, lineage documentation, validation controls, reconciliation, run logs, metric governance, auditability, handover documentation
- **Stakeholder & Delivery**: requirements gathering, workshop facilitation, review meetings, stakeholder management, insight presentation, cross-functional collaboration, rollout support, sign-off discussions
- **Business Data Exposure**: operational reporting, finance reporting, HR, payroll, planning, WMS data, performance analysis
- **Additional Tools**: Git / GitHub, dbdiagram.io, Lucidchart, Miro, Tableau, Codex, Claude Code

PROFESSIONAL EXPERIENCE

GXO Logistics — Bradford, UK
Senior MI Analyst — *Jan 2026 – Present*

- Delivered key components of a wider Microsoft Fabric migration and reporting modernisation programme, including source analysis, source-to-target mapping, ERD design, transformation logic, validation approach, refresh decisions, and reporting outputs across core operational datasets.
- Built and maintained Fabric pipelines, notebooks, and SQL / PySpark transformation logic, applying repeatable patterns to improve consistency, supportability, and reuse across reporting datasets.
- Implemented reconciliation, validation, and run-log controls between legacy and new outputs, including row-count and logic checks to support controlled cutover and reduce reporting drift.
- Supported the migration of an operational dataset end to end, producing documentation and artefacts using tools including dbdiagram.io, Lucidchart, Git, and Miro to improve clarity, traceability, and delivery discipline.
- Partnered with Operations, Finance, HR, Payroll, Planning, and site leadership to gather requirements, resolve logic conflicts, sense-check outputs, and support validation and sign-off.
- Built Power BI dashboards for different stakeholder groups, including solutions with row-level security and stakeholder-appropriate levels of detail, improving visibility of performance, underperformance, and escalation points.
- Produced ERDs, data-flow diagrams, lineage documentation, and runbooks to improve auditability, handover quality, and ongoing support across the reporting landscape.
- Improved usability and performance by aligning storage and transformation choices to downstream reporting needs, supporting more responsive and reliable outputs.

NexAura — Remote

Data Consultant (Project-based) *Jul 2025 – Jan 2026*

- Co-delivered an AI QA and coaching MVP for a call centre, covering call ingestion, transcription, scoring logic, and dashboard-ready outputs for team and agent performance review.
- Translated business and QA requirements into scoring logic, KPI definitions, reporting views, and supporting validation structures, helping ensure outputs were consistent, usable, and auditable in practice.
- Produced client handover artefacts including SOPs, KPI dictionaries, and process maps, supporting adoption and reducing post-delivery support risk.
- Worked across delivery, process, and reporting needs rather than analysis alone, helping shape outputs that could be sustained beyond initial build.
- Contributed to a solution that materially reduced the unit cost of QA coverage versus manual sampling by shifting effort toward automated first-pass scoring with human review focused on exceptions.

GXO Logistics Bradford, UK

Data Analyst (MI) *Aug 2022 – Aug 2024*

- Delivered end-to-end BI and reporting solutions to improve operational visibility, process control, and decision-making across warehouse operations, using Power BI, SQL, Power Query, Power Apps, Excel, and VBA.
- Led the digitisation of a floor-walk process by replacing ad hoc inventory checks with a Power Apps, SharePoint, Power Query, and Power BI solution, enabling structured issue capture, photo evidence, and standardised categories.
- Improved process consistency and removed double-handling, saving 4–8 staff hours per day across c.30 users and 3 shifts, while improving comparability of findings across teams and time periods.
- Enabled weekly senior reviews of recurring issues by area, category, and shift, supporting clearer accountability, stronger escalation, and better follow-through on actions.
- Owned weekly finance and operational performance reporting for senior leadership, consolidating inputs from Finance, HR, Payroll, Planning, and Operations into a single view of site performance.
- Resolved conflicts across source inputs by reconciling figures, applying logic and sense checks, and incorporating operational context to keep reporting accurate and decision-useful.
- Produced high-level summaries for senior stakeholders, chaired weekly performance meetings, and responded to challenge on performance movements, drivers, and reporting logic.
- Automated a suite of 10+ daily operational reports in Excel VBA, covering ingestion, cleaning, calculations, pivot/chart refresh, and email distribution; saved 6 hours per day and reduced manual error risk through standardised logic and validation checks.

SELECTED PROJECT

House Price Prediction Project | Personal

- Built and compared multiple regression-based and machine learning models using a Kaggle housing dataset, including linear regression, decision tree, random forest, XGBoost, and gradient boosting.
- Carried out EDA, null handling, feature selection, normalisation, and train/test splitting, and evaluated models using MAE and RMSE.
- Found that Gradient Boosting Regressor gave the strongest performance, with tuned RMSE at approximately 12.5% of mean sale price.

EDUCATION

Leeds Trinity University Leeds, UK
PGCE Secondary Mathematics *Sep 2024 – Jul 2025*

University of Leeds Leeds, UK
BEng Chemical and Process Engineering *Sep 2019 – Jun 2022*

CERTIFICATIONS

- Google Data Analytics Professional Certificate (Coursera, 2022)
