PROFESSIONAL SUMMARY

BI Developer / Senior BI Analyst with 3+ years' experience building governed Power BI reporting, automated MI processes and Microsoft Fabric-enabled data products across operationally complex environments.
Strong end-to-end delivery experience, from stakeholder discovery and requirements gathering through to data modelling, transformation, dashboard development, validation, documentation, rollout, and sign-off.
Experienced working with unclean, cross-functional data from Operations, Finance, HR, Payroll and Planning teams, translating conflicting source logic into trusted reporting outputs for senior Leadership and frontline managers.
Contributing to Microsoft Fabric-enabled reporting modernisation, while actively developing analytics engineering capability through use of AI and emerging data tools, including Github, Claude Code, Codex, dbt and Databricks for personal development and project work, with a strong emphasis on independent validation and governance.

CORE SKILLS

- **BI Development**: Power BI, DAX, Power Query, Excel, semantic modelling, dashboard design, KPI reporting, drill-through analysis, RLS, Power BI Service, report optimisation, stakeholder-ready reporting
- **Data Engineering & Transformation**: SQL/T-SQL, CTEs, window functions, query optimisation, Lakehouse, Pipelines/Data Factory, Notebooks, SQL endpoints, Python/PySpark, ETL/ELT, orchestration, VBA, SSIS
- **Data Modelling & Governance**: requirements gathering, workshop facilitation, senior stakeholder engagement, cross-functional delivery, UAT/support, sign-off discussions, adoption support, insight presentation
- **Business Domains**: operations, logistics, finance reporting, HR, payroll, workforce planning, performance management, WMS & CMS data
- **Emerging Tools & AI**: Git/GitHub, dbt, Databricks fundamental, Claude Code, Codex, Copilot, gen AI-assisted documentation, debugging and development workflows

PROFESSIONAL EXPERIENCE

GXO Logistics — Bradford, UK
Senior MI Analyst — *Jan 2026 – Present*

- Delivered key components of a Microsoft Fabric migration and reporting modernisation programme, covering source analysis, source-to-target mapping, ERD design, transformation logic, validation controls, and downstream reporting outputs across core operational datasets.
- Built and maintained Fabric pipelines, notebooks, and SQL/PySpark transformation logic, applying repeatable patterns to improve consistency, reusability, and supportability across reporting datasets.
- Designed reconciliation, validation, and run-log controls between legacy and new outputs, including row-count, data quality, and business logic checks to support controlled cutover and reduce reporting drift.
- Developed a self-service employee kiosk using Raspberry Pi, VuePilot, Power BI, Power Apps, and Power Automate, enabling colleagues to view performance ratings and submit downtime incidents without depending on team manager availability.
- Embedded a Power Apps downtime-capture workflow inside a Power BI report, allowing employees to submit incidents directly through the kiosk while triggering manager approval requests through Power Automate.
- Supported adoption of the kiosk product across the operation, with the report receiving around 200 views/day across a 2-month period, indicating strong frontline usage and practical business value
- Partnered with Operations, Finance, HR, Payroll, Planning, and site leadership to gather requirements, resolve conflicting source definitions, sense-check outputs, and secure stakeholder validation/sign-off.
- Built Power BI reporting for operational managers and senior leaders, including row-level security and stakeholder-specific views to improve visibility of performance, underperformance, and escalation points.

- Produced ERDs, data-flow diagrams, lineage notes, and runbooks using tools like dbdiagram.io, Lucidchart, Miro and Github, improving auditability, handover quality, and long-term maintainability.
- Used AI-assisted development and documentation workflows, including Copilot, to accelerate debugging, documentation and solution design while independently validating logic, outputs and business rules before use.

NexAura — Remote

Data Consultant (Project-based) — *Jul 2025 – Jan 2026*

- Co-delivered an AI-enabled QA and coaching MVP for call centre operations, covering call ingestion, transcription, rubric-based scoring logic, and dashboard-ready performance outputs.
- Translated QA and operational requirements into KPI definitions, scoring rules, reporting views, and validation structures, helping ensure outputs were consistent, explainable, and usable by non-technical stakeholders.
- Contributed to a solution that materially reduced the unit cost of QA coverage versus manual sampling by shifting effort toward automated first-pass scoring with human review focused on exceptions.

GXO Logistics — Bradford, UK

Data Analyst (MI) — *Aug 2022 – Aug 2024*

- Delivered end-to-end BI and reporting solutions across warehouse operations, combining stakeholder requirements, unclean data, transformation logic, Power BI reporting, validation checks, and rollout support.
- Led the digitisation of a process by replacing ad hoc inventory checks with a Power Apps, SharePoint, Power Query, and Power BI solution, enabling structured issue capture, photo evidence, and standardised categories.
- Improved process consistency and removed double-handling, saving 4–8 staff hours per day across c.30 users and 3 shifts, while improving comparability of findings across teams, areas, and time periods.
- Enabled weekly senior reviews of recurring issues by area, category, and shift, supporting clearer accountability, evidence-based escalation, and stronger follow-through on operational actions.
- Owned weekly finance and operational performance reporting for senior leadership, consolidating inputs from Finance, HR, Payroll, Planning, and Operations into a single view of site performance.
- Reconciled conflicting source inputs, investigated data issues and incorporated operational context, such as downtime, labour changes, and site activity, to keep reporting accurate, explainable, and decision-useful.
- Produced senior-level summaries, chaired weekly performance discussions, and responded to challenge on performance movements, metric definitions, data logic, and underlying business drivers.
- Automated 10+ Excel reports, covering multi-file ingestion, cleaning, calculations, pivot/chart refresh, and email distribution; saving 6 hrs/day and reducing manual error risk through standardised logic and checks.

PORTFOLIO AND TECHNICAL DEVELOPMENT

- Building a personal analytics engineering project using DuckDB, dbt, Dagster, and Github to emulate production-style ingestion, transformation, testing, orchestration, and documentation.
- Actively developing modern data-platform skills across Microsoft Fabric, dbt, Databricks, Git, CI concepts and AI-assisted development using Claude Code and Codex.
- Maitaining a public BI portfolio documenting case studies, technical write-ups and project work, with emphasis on governed reporting, data modelling, validation controls and stakeholder-ready outputs.

EDUCATION

Leeds Trinity University — Leeds, UK

PGCE Secondary Mathematics — *Sep 2024 – Jul 2025*

University of Leeds — Leeds, UK

BEng Chemical and Process Engineering — *Sep 2019 – Jun 2022*

CERTIFICATIONS

- Google Data Analytics Professional Certificate (Coursera, 2022)
- Databricks Fundamentals (2026)
