PROFESSIONAL SUMMARY

BI Developer / Senior BI Analyst with 3+ years' experience delivering governed Power BI reporting, automated MI processes and Microsoft Fabric-enabled data products across operationally complex environments. Strong end-to-end delivery experience, from stakeholder discovery and requirements gathering through to data modelling, transformation, dashboard development, validation, documentation, rollout and sign-off. Experienced translating messy, cross-functional data from Operations, Finance, HR, Payroll and Planning into trusted reporting outputs for senior leaders and frontline managers. Combines hands-on BI/data delivery with project lead-style coordination, including task management, communication workflows, documentation structures and collaborative technical delivery across small teams.

CORE SKILLS

- **BI Development:** Power BI, DAX, Power Query, Excel, semantic modelling, dashboard design, KPI reporting, drill-through analysis, RLS, Power BI Service, report optimisation, stakeholder-ready reporting
- **Data Engineering & Transformation:** SQL/T-SQL, CTEs, window functions, query optimisation, Microsoft Fabric, Lakehouse, Pipelines/Data Factory, Notebooks, SQL endpoints, Python/PySpark, ETL/ELT, orchestration, VBA, SSIS
- **Data Modelling & Governance:** source-to-target mapping, ERD design, data modelling, data validation, reconciliation controls, data quality checks, lineage documentation, KPI definitions, metric governance, runbooks
- **Stakeholder & Delivery:** requirements gathering, workshop facilitation, senior stakeholder engagement, cross-functional delivery, UAT/support, sign-off discussions, adoption support, insight presentation, project coordination
- **Business Domains:** operations, logistics, finance reporting, HR, payroll, workforce planning, performance/people management, KPI reporting, WMS & CMS data
- **Modern Data & AI Tools:** Git/GitHub, GitHub organisation setup, dbt, Databricks Fundamentals, CI concepts, Claude Code, Codex, Copilot, AI-assisted documentation, debugging and development workflows

PROFESSIONAL EXPERIENCE

GXO Logistics

Senior MI Analyst

Bradford, UK

Jan 2026 – Present

- Delivered key components of a Microsoft Fabric migration and reporting modernisation programme, covering source analysis, source-to-target mapping, ERD design, transformation logic, validation controls, and downstream reporting outputs across core operational datasets.
- Built and maintained Fabric pipelines, notebooks, and SQL/PySpark transformation logic, applying repeatable patterns to improve consistency, reusability, and supportability across reporting datasets.
- Designed reconciliation, validation, and run-log controls between legacy and new outputs, including row-count, data quality, and business logic checks to support controlled cutover and reduce reporting drift.
- Developed a self-service employee kiosk using Raspberry Pi and VuePilot, enabling colleagues to view performance ratings and submit downtime incidents without depending on team manager availability.
- Embedded a Power Apps downtime-capture workflow inside a Power BI report, allowing employees to submit incidents directly through the kiosk while triggering manager approval requests through Power Automate.
- Supported adoption of the kiosk product across the operation, with the report receiving around 200 views/day across a 2-month period, indicating strong frontline usage and practical business value
- Partnered with Operations, Finance, HR, Payroll, Planning, and site leadership to gather requirements, resolve conflicting source definitions, sense-check outputs, and secure stakeholder validation/sign-off.
- Built Power BI reporting for operational managers and senior leaders, including row-level security and stakeholder-specific views to improve visibility of performance, underperformance, and escalation points.

- Produced ERDs, data-flow diagrams, lineage notes, and runbooks, improving auditability, handover quality, and long-term maintainability.
- Used AI-assisted development and documentation workflows, including Copilot, to accelerate debugging, documentation and solution design while independently validating logic, outputs and business rules before use.

NexAura

Remote

Data & AI Project Lead / Consultant (Project-based)

Jul 2025 – Jan 2026

- Co-delivered an AI-enabled QA and coaching MVP for call centre operations, covering call ingestion, transcription, rubric-based scoring logic and dashboard-ready performance outputs.
- Took on a project lead-style role across delivery coordination, task management, communication workflows, documentation structure and technical collaboration for a small project team.
- Implemented lightweight project management and communication workflows to structure the backlog, allocate tasks, track progress, surface blockers and maintain delivery momentum.
- Set up a GitHub organisation and shared documentation structure to support collaborative coding, repository management, technical documentation, handover quality and more disciplined delivery workflows.
- Translated QA and operational requirements into KPI definitions, scoring rules, reporting views and validation structures, helping ensure outputs were consistent, explainable and usable by non-technical stakeholders.
- Contributed to a solution that materially reduced the unit cost of QA coverage versus manual sampling by shifting effort toward automated first-pass scoring with human review focused on exceptions.

GXO Logistics

Bradford, UK

Data Analyst (MI)

Aug 2022 – Aug 2024

- Owned weekly KPI, finance and operational performance reporting for senior leadership, consolidating inputs from Finance, HR, Payroll, Planning, and Operations into a single view of site performance.
- Reconciled conflicting source inputs, investigated data issues and incorporated operational context, such as downtime, labour changes, and site activity, to keep reporting accurate, explainable, and decision-useful.
- Produced senior-level summaries, chaired weekly performance discussions, and responded to challenge on performance movements, metric definitions, data logic, and underlying business drivers.
- Led the digitisation of a process by replacing ad hoc inventory checks with a Power Apps, SharePoint, Power Query, and Power BI solution, enabling structured issue capture, photo evidence, and standardised categories.
- Improved process consistency and removed double-handling, saving 4–8 staff hours per day across c.30 users and 3 shifts, while improving comparability of findings across teams, areas, and time periods.
- Enabled weekly senior reviews of recurring issues by area, category, and shift, supporting clearer accountability, evidence-based escalation, and stronger follow-through on operational actions.
- Automated 10+ Excel reports, covering multi-file ingestion, cleaning, calculations, pivot/chart refresh, and email distribution; saving 6 hrs/day and reducing manual error risk through standardised logic and checks.

EDUCATION

Leeds Trinity University

Leeds, UK

PGCE Secondary Mathematics

Sep 2024 – Jul 2025

University of Leeds

Leeds, UK

BEng Chemical and Process Engineering

Sep 2019 – Jun 2022

CERTIFICATIONS

- Google Data Analytics Professional Certificate (Coursera, 2022)
- Databricks Fundamentals (2026)
